Abstracts

Artificial leather is a material intended to substitute for leather in fields such as upholstery, clothing, footwear and fabrics and other uses where a leather-like finish is desired but the actual material is cost-prohibitive or unsuitable.

Polyvinylchloride (PVC), also commonly referred to as vinyl, is essentially a flexible plastic made from PVC resin, various fillers, and additives such as plasticizers to manipulate its softness, color and texture. Once the desired fillers have been added, PVC is used to coat one side of a knit or woven fabric backing and sometimes a center layer of foam.
