Abstracts

Automotive washer pumps are used in almost every passenger and commercial vehicle. They provide clear visibility to the driver by cleaning the windshield and headlamp glasses. The high pressure needed to clean the dust or dirt from the glass is generated by the washer. A typical automotive washer pump has a cylindrical structure with a port for connecting hoses. The splash fluid flows through it to reach the nozzle. An inlet port, which is connected to the fluid reservoir, supplies the cleaning fluid to the pump. Almost every automotive washer pump is powered by an electric motor, which is plugged into it individually and gives an output of either 12V or 24V.

This report elaborates the market size, market characteristics, and market growth of the Automotive Washer Pumps industry, and breaks down according to the type, application, and consumption area of Automotive Washer Pumps. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
