Abstracts

Beta-carotene is a carotenoid. Carotenoids are naturally occurring pigments found in plants, and are largely responsible for the vibrant colors of some fruits and vegetables. Beta-carotene, for example, is responsible for giving carrots their orange color. Once ingested, beta-carotene is either converted into vitamin A (retinol), which the body can use in a variety of ways, or it acts as an antioxidant to help protect cells from the damaging effects of harmful free radicals. As much as 50 percent of vitamin A in a typical diet is provided by beta-carotene and other carotenoids.

This report elaborates the market size, market characteristics, and market growth of the Beta Carotene industry, and breaks down according to the type, application, and consumption area of Beta Carotene. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Beta Carotene in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
