## Abstracts

Bio-based PE is used in packaging applications such as totes, plastic films and bottles. Fluctuating prices coupled with limited crude oil supply are expected to force polymer manufacturers to develop bio-based alternatives, including bio-based PE. In addition, the regenerability of bio-based PE makes it an environmentally friendly alternative to chemically similar products and is expected to increase market demand during the forecast period.

This report elaborates the market size, market characteristics, and market growth of the Bio-Based Polyethylene industry, and breaks down according to the type, application, and consumption area of Bio-Based Polyethylene. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Bio-Based Polyethylene in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
