Abstracts

Biofertilizers are substances containing living microorganisms that, when applied to seeds, plant surfaces or soils, colonize the rhizosphere or plant and promote growth by increasing the supply or availability of the main nutrients of the host plants. Biofertilizers increase nutrients by fixing nitrogen, dissolving phosphorus, and natural processes that stimulate plant growth by synthesizing growth-promoting substances.

This report elaborates the market size, market characteristics, and market growth of the Bio Fertilizer industry, and breaks down according to the type, application, and consumption area of Bio Fertilizer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
