Abstracts

Bio methane is a renewable energy source produced by the natural decomposition of organic matter such as green waste, agricultural waste, domestic waste, food industrial waste, and industrial waste. The process of decomposing organic matter in an anaerobic environment produces biogas which is then purified to produce biomethane.

This report elaborates the market size, market characteristics, and market growth of the Bio Methane industry, and breaks down according to the type, application, and consumption area of Bio Methane. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Bio Methane in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
