## Abstracts

Biobased Biodegradable Plastics are plastics that are degraded by the action of microorganisms such as bacteria, molds (fungi) and algae found in nature. The ideal biodegradable plastic is a polymer material that has excellent performance, can be completely decomposed by environmental microorganisms after being discarded, and is finally inorganicized to become an integral part of the carbon cycle in nature. 'Paper' is a typical biodegradable material, while 'synthetic plastic' is a typical polymer material. Therefore, the biodegradable plastic is a polymer material having both material properties of 'paper' and 'synthetic plastic'. This report elaborates the market size, market characteristics, and market growth of the Biobased Biodegradable Plastics industry, and breaks down according to the type, application, and consumption area of Biobased Biodegradable Plastics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Biobased Biodegradable Plastics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
