Abstracts

Bioinformatics is an interdisciplinary field that develops methods and software tools for understanding biological data. As an interdisciplinary field of science, bioinformatics combines biology, computer science, mathematics and statistics to analyze and interpret biological data.

Bioinformatics is both an umbrella term for the body of biological studies that use computer programming as part of their methodology, as well as a reference to specific analysis 'pipelines' that are repeatedly used, particularly in the field of genomics. Common uses of bioinformatics include the identification of candidate genes and single nucleotide polymorphisms (SNPs).

This report elaborates the market size, market characteristics, and market growth of the Bioinformatics Services industry, and breaks down according to the type, application, and consumption area of Bioinformatics Services. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
