Abstracts

Bioplastic Utensils are different from plastic ones in that they are derived from natural resources, hence “bioplastic.”? Whereas plastic utensils are constructed from petroleum, bioplastic utensils come from plants that are found naturally in the environment, such as corn, sugarcane, grass, bamboo, and other such materials. Therefore, because they are constructed of natural materials, they will more easily break down and decompose than traditional plastic will.

This report elaborates the market size, market characteristics, and market growth of the Bioplastic Utensils industry, and breaks down according to the type, application, and consumption area of Bioplastic Utensils. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Bioplastic Utensils in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
