Abstracts

Biosimilar therapy is defined as a therapy that is highly similar to approved biopharmaceuticals. They are made by converting biopharmaceuticals made from living cells in the laboratory into large-scale production molecules. This is quite different from the general treatment method, which is identical to the reference small molecule drug. The reason behind this is that it is impossible to make a copy of the same biologic drug. This report elaborates the market size, market characteristics, and market growth of the Biosimilar Drug industry, and breaks down according to the type, application, and consumption area of Biosimilar Drug. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Biosimilar Drug in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
