Abstracts

Blind Spot Detection (BSD) system is a sensor based detection system implemented in automobiles that is used for monitoring vehicles at the rear and side of the driver/vehicle. Such systems generate tactile, audible, vibrating or visual form of warnings. They also assist the driver at the parking lots when there are other vehicles approaching from the sides. Blind spots are caused due to various objects such as passengers, headrests and window pillars. Mirrors are generally used to remove the blind spots but the disadvantage being that they leave huge dead on all the sides of the vehicle. BSD systems, with the help of cameras and sensor systems generate information about various objects that are outside the range of driver's vision.

This report elaborates the market size, market characteristics, and market growth of the Blind Spot Detection (BSD) System And Adaptive Cruise Control (ACC) System industry, and breaks down according to the type, application, and consumption area of Blind Spot Detection (BSD) System And Adaptive Cruise Control (ACC) System.
