## **Abstracts**

An automated blood bank system replaces manual screening tests on blood products. Used by blood donation centers and blood transfusion sites, a blood bank automation system can run mandated tests for HIV, hepatitis B and C, syphilis, and human T cell lymphotropic virus. Blood bank automation systems are also used to determine blood type and cross-match donor units to a patient who needs blood with a specific phenotype. Variable between manufacturers, features of automated blood bank systems include the types of tests it is capable of performing, number of tests per hour, discrete and/or continuous sampling, and STAT mode availability.

This report elaborates the market size, market characteristics, and market growth of the Blood Bank Automation System industry, and breaks down according to the type, application, and consumption area of Blood Bank Automation System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
