Abstracts

Blood transfusion diagnostics are products used to conduct tests before transfusion of blood and blood products from donor to recipient. These products include instruments such as analyzers and centrifuges, and kits & reagents for various tests such as blood grouping and disease screening for donors as well as patients. Blood screening is a major step in the pre-transfusion process. Various instruments, test kits, and reagents based on molecular and serological techniques are used to detect transfusion transmitted infections (TTIs) along with establishing the compatibility of donor and patient blood group before transfusion.

This report elaborates the market size, market characteristics, and market growth of the Blood Transfusion Diagnostics industry, and breaks down according to the type, application, and consumption area of Blood Transfusion Diagnostics.
