## Abstracts

Body composition analyzer is used to analyse the percentages of fat, bone, water and muscle in human bodies. Because muscular tissue takes up less space in our body than fat tissue, our body composition, as well as our weight, determines leanness. Two people of the same sex and body weight may look completely different because they have a different body composition.

This report elaborates the market size, market characteristics, and market growth of the Body Composition Analyzer industry, and breaks down according to the type, application, and consumption area of Body Composition Analyzer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Body Composition Analyzer in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
