Abstracts

Borosilicate glass is a type of glass with silica and boron trioxide as the main glass-forming constituents. Borosilicate glasses are known for having very low coefficients of thermal expansion ($\sim 3 \times 10^{-6} \text{ K}^{-1}$ at 20°C), making them resistant to thermal shock, more so than any other common glass.

This report elaborates the market size, market characteristics, and market growth of the Borosilicate Glass industry, and breaks down according to the type, application, and consumption area of Borosilicate Glass. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Borosilicate Glass in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
