Abstracts

Bowed string instruments are a subcategory of string instruments that are played by a bow rubbing the strings. The bow rubbing the string causes vibration which the instrument emits as sound. Bowed string instruments have held a special place in music for many years. They form the backbone of the symphony orchestra, and they are widely used as solo instruments and in chamber music as well. They are instruments of great beauty and versatility. Unlike many other musical instruments, bowed string instruments have been the objects of considerable scientific study. Even so, their acoustical behavior is just beginning to be understood.

This report elaborates the market size, market characteristics, and market growth of the Bowed String Instrument industry, and breaks down according to the type, application, and consumption area of Bowed String Instrument.
