Abstracts

Microblading (or eyebrow embroidery) is a relatively new, manual method. It is considered to be semi-permanent, as compared to the traditional hairstroke technique. It is done using a very fine blade to deposit pigments into the epidermis. Because we're impacting color closer to the surface, the strokes appear crisp and very fine. This report elaborates the market size, market characteristics, and market growth of the Brows & Mircoblading & Lash Extensions industry, and breaks down according to the type, application, and consumption area of Brows & Mircoblading & Lash Extensions. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Brows & Mircoblading & Lash Extensions in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
