## **Abstracts**

Building Energy Management Systems (BEMS) are hardware-software systems installed in buildings that monitor and control the energy needs of a building to ensure efficient and economical energy utilization. These systems monitor a building's energy consumption by electrical and mechanical equipment such as heaters, ventilators, air conditioners, and lighting to increase energy efficiency, and reduce energy costs. At present, building systems are integrated for better synchronization and monitoring of data on energy usage and better optimization.

This report elaborates the market size, market characteristics, and market growth of the Building Energy Management Systems industry, and breaks down according to the type, application, and consumption area of Building Energy Management Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Building Energy Management Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
