## Abstracts

Building-integrated photovoltaics (BIPV) are photovoltaic materials that are used to replace conventional building materials in parts of the building envelope such as the roof, skylights, or facades. The conventional building materials that are in parts of the infrastructure such as the skylights, roof, or facades are replaced by photovoltaic materials that are known as building-integrated photovoltaics (BIPV). They are being widely adopted in the construction of new buildings as a chief source of electrical power. This report elaborates the market size, market characteristics, and market growth of the Building Integrated Photovoltaic industry, and breaks down according to the type, application, and consumption area of Building Integrated Photovoltaic. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
