Abstracts

Building & construction plastics are organic polymers of higher molecular mass often containing additives. The plastics are preferred in building & construction as it is light weight and energy efficient. In addition, plastics have several characteristics such as scratch resistance, durability, design freedom and flexibility. The plastics used in the building & construction have lower maintenance and range of waste management options. The building & construction plastics are classified as PVC, PS, acrylics, PU, TPE, composite materials and others (PET, PP, PE, etc.). PVC is the most used plastic in the building & construction industry. PVC finds applications in pipes & ducts, windows & door profiles and roofing.

This report elaborates the market size, market characteristics, and market growth of the Building Plastics industry, and breaks down according to the type, application, and consumption area of Building Plastics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
