Abstracts

The C9 Aromatic Solvents Category is comprised of a petroleum naphtha refinery stream, "Solvent naphtha, (petroleum), light aromatic," (CAS RN 64742-95-6; hereafter referred to as C9 aromatic naphtha), from which the other, more chemically pure members of this category are isolated. These other members include several C9 aromatic isomers (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and mixed ethyltoluenes) that have relatively limited production and are used primarily as chemical intermediates. For category members that have data, physicochemical properties are very similar. In addition, existing data indicate that the mammalian and acute aquatic toxicity of the isolated C9 aromatic isomer substances are similar to the C9 aromatic mixture.

This report elaborates the market size, market characteristics, and market growth of the C9 Aromatic Solvent industry, and breaks down according to the type, application, and consumption area of C9 Aromatic Solvent. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for C9 Aromatic Solvent in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
