Abstracts

The CAD/CAM software is characterized by superior parametric design, variable design and feature modeling technology combined with traditional solid and surface modeling functions. The processing method is complete, accurate and practical, and can be processed from simple 2-axis. The 5-axis linkage method is used to machine extremely complex workpiece surfaces, and the CNC machining process can be automatically controlled and optimized, while a secondary development tool is provided to allow the user to expand.
This report elaborates the market size, market characteristics, and market growth of the CAD or CAM Software industry, and breaks down according to the type, application, and consumption area of CAD or CAM Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
