Abstracts

Canine Stem Cell Therapy refers to the treatment of canine joint-related diseases using stem cells. Adipose-derived stem cells (ASCs) are the most common and most desirable adult stem cells because of their safety, their ability to be harvested and used, and the ability to differentiate into multiple cell lineages. Most early clinical studies have focused on adipose-derived stem cells for the treatment of a variety of chronic diseases such as arthritis, tendinitis, lameness and atopic dermatitis in dogs. A lot of attention in veterinary medicine is the treatment of osteoarthritis in dogs.
This report elaborates the market size, market characteristics, and market growth of the Canine Stem Cell Therapy industry, and breaks down according to the type, application, and consumption area of Canine Stem Cell Therapy. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
