Abstracts

A captive power plant is a facility that is dedicated to providing a localised source of power to an energy user. These are typically industrial facilities or large offices. The plants may operate in grid parallel mode with the ability to export surplus power to the local electricity distribution network. A captive power plant reduces power transmission losses and provides power reliability.

This report elaborates the market size, market characteristics, and market growth of the Captive Power Plant industry, and breaks down according to the type, application, and consumption area of Captive Power Plant. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
