Abstracts

Cardiopulmonary Autotransfusion System is a sophisticated device with an exceptionally effective design that provides autologous blood during surgical procedures. Autotransfusion is a process wherein a person receives their own blood for a transfusion, instead of banked allogenic (separate-donor) blood. There are two main kinds of Autotransfusion: Blood can be autologous 'pre-donated' (termed so despite 'donation' not typically referring to giving to one's self) before a surgery, or alternatively, it can be collected during and after the surgery using an intraoperative blood salvage device. The latter form of Autotransfusion is utilized in surgeries where there is expected a large volume blood loss.

This report elaborates the market size, market characteristics, and market growth of the Cardiopulmonary Autotransfusion System industry, and breaks down according to the type, application, and consumption area of Cardiopulmonary Autotransfusion System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
