## **Abstracts**

Carotenoids are chemical compounds produced by nature that have a physiological importance to the plants that produce them. Originally, carotenoids were used and commercialized as colors. Over the past decade, a better understanding of the function of carotenoids in living organisms has emerged, leading to their use as a nutritional additive with a more or less strong health claim. Carotenoids are used as coloring components in foods and feeds, occasionally in cosmetic products, and as physiologically active ingredients in nutritional supplements.

This report elaborates the market size, market characteristics, and market growth of the Carotenoids industry, and breaks down according to the type, application, and consumption area of Carotenoids. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Carotenoids in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
