Abstracts

For the easy burial in the wild, cats naturally excrete in soft or sandy soil. To stimulate this natural desire, a litter box's lowest part is occupied characteristically with an inch (2.5 cm) or additional of cat litter. Litter box filler is a portable, granular material that absorbs moisture and odors such as ammonia. Some litter box brands contain baking soda to absorb odors. The most common material is clay, although recycled paper is also used. Pellets and silica-based crystal are also used.

This report elaborates the market size, market characteristics, and market growth of the Cat Litters industry, and breaks down according to the type, application, and consumption area of Cat Litters. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
