## Abstracts

The ligand of CD40, known as CD154 or CD40L, is a type II transmembrane protein, with a variable molecular weight between 32 and 39 kDa because of post-translation modifications. CD40L is a member of the TNF superfamily and is characterized by a sandwich extracellular structure that is composed of a  $\beta$ -sheet,  $\alpha$ -helix loop, and a  $\beta$ -sheet. CD40L is expressed primarily by activated T cells, as well as activated B cells and platelets; and under inflammatory conditions is also induced on monocytic cells, natural killer cells, mast cells, and basophils.

This report elaborates the market size, market characteristics, and market growth of the CD40 Ligand industry, and breaks down according to the type, application, and consumption area of CD40 Ligand. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
