Abstracts

Concrete is basically a mixture of aggregates and paste. The aggregates are sand and gravel or crushed stone; the paste is water and cement. Portland cement is not a brand name, but the generic term for the type of cement used in virtually all concrete, just as stainless is a type of steel and sterling a type of silver.

Fly Ash is a fine powder that is a byproduct of burning pulverized coal in electric generation power plants. Fly ash is a pozzolan, a substance containing aluminous and siliceous material that forms cement in the presence of water. When mixed with lime and water, fly ash forms a compound similar to Portland cement.

Slag is a glassy by-product left after the desired metal is separated from the ore. The slag is usually a mixture of metal oxide and silica. However, the slag may contain metal sulfides and elemental metals.

Crushed stone, one of the most accessible natural resources, is a major basic raw material used by construction, agriculture, and other industries that utilize complex chemical and metallurgical processes. 75% crushed stone was used as construction material, mostly for road construction and maintenance; 13% for cement manufacturing; 7% for lime manufacturing; 3% for other chemical, special, and miscellaneous uses and products; and 2% for agricultural uses.

This report elaborates the market size, market characteristics, and market growth of the Cement, Fly Ash, Slag and Crushed Stone industry, and breaks down according to the type, application, and consumption area of Cement, Fly Ash, Slag and Crushed Stone. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for

Cement, Fly Ash, Slag and Crushed Stone in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
