Abstracts

Cenospheres are inert, light weight and hollow spheres particularly made of alumina or silica and filled with inert gases or air. They are typically manufactured as a by-product of coal combustion in the thermal power plants. The appearance of cenospheres varies from almost white to grey and its density is approximately 0.4–0.8 g/cm³ hence, they have the property of incredible buoyancy.

This report elaborates the market size, market characteristics, and market growth of the Cenosphere industry, and breaks down according to the type, application, and consumption area of Cenosphere. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cenosphere in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
