Abstracts

A centrifugal chiller uses electricity as the power source. The Freon refrigerant evaporates and absorbs the heat of the brine water in the evaporator for refrigeration. The freon vapor after evaporation and absorption is compressed by the compressor into a high temperature and high pressure gas. After condensation, it becomes a liquid and is throttled through the expansion valve into the evaporator for recycling.

This report elaborates the market size, market characteristics, and market growth of the Centrifugal Chiller industry, and breaks down according to the type, application, and consumption area of Centrifugal Chiller. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
