Abstracts

Ceramic foam is a tough foam made from ceramics. Manufacturing techniques include impregnating open-cell polymer foams internally with ceramic slurry and then firing in a kiln, leaving only ceramic material. The foams may consist of several ceramic materials such as aluminium oxide, a common high-temperature ceramic, and gets insulating properties from the many tiny air-filled voids within the material.

This report elaborates the market size, market characteristics, and market growth of the Ceramic Foam industry, and breaks down according to the type, application, and consumption area of Ceramic Foam. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Ceramic Foam in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
