Abstracts

Pulses are the edible seeds of plants in the legume family. Pulses grow in pods and come in a variety of shapes, sizes and colors. The United Nations Food and Agriculture Organization (FAO) recognizes 11 types of pulses: dry beans, dry broad beans, dry peas, chickpeas, cow peas, pigeon peas, lentils, Bambara beans, vetches, lupins and pulses. A cereal is any edible component of the grain of cultivated grass, composed of the endosperm, germ, and bran. Cereal grains are grown in greater quantities and provide more food energy worldwide than any other type of crop and are therefore staple crops.

This report elaborates the market size, market characteristics, and market growth of the Cereals and Pulses industry, and breaks down according to the type, application, and consumption area of Cereals and Pulses. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
