## Abstracts

Cervical artificial disc is a device inserted between two cervical vertebrae in patients with cervical disc herniation through disc replacement surgery. Disc replacement surgery helps preserve the motion of the disc space and is an alternative to fusion techniques such as plates and screws, and bone grafts that restrict motion. Cervical artificial discs reduce degeneration of adjacent segments of the cervical spine, maintain normal neck motion, and ensure faster return to normal activity.

This report elaborates the market size, market characteristics, and market growth of the Cervical Artificial Discs industry, and breaks down according to the type, application, and consumption area of Cervical Artificial Discs. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
