## **Abstracts**

Chafing fuel is basically a heating fuel. Chafing fuel cans are placed under the chafing dish for heating food, thus, not used for cooking food. Chafing fuel is sold in a small canister and burned directly within the canister, with or without a wick. Ethanol, methanol, or glycol are the types of fuel used in chafing fuel cans. Chafing fuel canisters are available in different sizes and volumes of fuel or gel. Chafing fuel canisters can be utilized safely indoors, and produce minimal soot or odor. They are also utilized for outdoor cooking, emergency heating, and fondue.

This report elaborates the market size, market characteristics, and market growth of the Chafing Fuel industry, and breaks down according to the type, application, and consumption area of Chafing Fuel.
