Abstracts

Chemical Oxygen Demand COD is a chemical method for measuring the amount of reducing substances in a water sample that need to be oxidized. The oxygen equivalent of the waste water, the effluent from the wastewater treatment plant, and the contaminated water, which can be oxidized by strong oxidants (usually organic matter). In the study of river pollution and industrial wastewater properties and the operation and management of wastewater treatment plants, it is an important and fast-measured organic pollution parameter, often expressed by the symbol COD.

This report elaborates the market size, market characteristics, and market growth of the Chemical Oxygen Demand(COD) industry, and breaks down according to the type, application, and consumption area of Chemical Oxygen Demand(COD). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
