Abstracts

Chlorobenzene is an aromatic organic compound with the chemical formula C_6H_5Cl . It is colorless, flammable liquid and acts as a common solvent for use as an intermediate in the manufacture of other chemicals. These compounds are primarily used as an intermediary in the manufacture and synthesis of pesticides and various other chemicals. Chlorobenzene came into existence in 1851 and at present is produced by benzene chlorination in the existence of catalyst, acids such as sulfur dichloride, ferric chloride and anhydrous aluminium chloride. This chlorination process of benzene can ideally produce 12 different chlorobenzenes, however, world events and technology has decreased the chlorobenzene to production of three primary products such as monochlorobenzene, p-dichlorobenzene and o-dichlorobenzene. Other chlorobenzenes that are not produced on a large scale include m-dichlorobenzene, tetrachlorobenzenes, trichlorobenzenes and hexachlorobenzene.

This report elaborates the market size, market characteristics, and market growth of the Chlorobenzene industry, and breaks down according to the type, application, and consumption area of Chlorobenzene. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Chlorobenzene in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
