Abstracts

In an internal combustion engine, a choke valve modifies the air pressure in the intake manifold, thereby altering the ratio of fuel and air quantity entering the engine. Choke valves are generally used in naturally aspirated engines with carburetors to supply a richer fuel mixture when starting the engine.

This report elaborates the market size, market characteristics, and market growth of the Choke Valve industry, and breaks down according to the type, application, and consumption area of Choke Valve. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Choke Valve in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
