Abstracts

CIGS stands for copper indium gallium selenide, it is a thin film solar cell that is used to convert sun rays into electrical energy. CIGS thin film solar cells are manufactured by the process of depositing a thin layer of indium, copper, selenide and gallium on plastic backing or glass, having electrodes on the back and front to collect current. CIGS has a high absorption coefficient and absorbs sunlight strongly, so a thin film of this material is required to obtain the same electric energy as that of semiconductor materials.

This report elaborates the market size, market characteristics, and market growth of the Cigs Thin-Film Solar Panel industry, and breaks down according to the type, application, and consumption area of Cigs Thin-Film Solar Panel. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cigs Thin-Film Solar Panel in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
