Abstracts

Circulating tumor cells (CTCs) are tumor cells that detach from the primary tumor and travel in the bloodstream, spreading from the original tumor to other locations, leading to cancer metastasis. These cells exist in peripheral blood of cancer patients and detection of CTCs can help to determine the process of metastasis. In contrast with other blood cells, the number of CTCs is very rare in blood which makes them difficult to detect. This report elaborates the market size, market characteristics, and market growth of the Circulating Tumor Cells (CTCS) and Cancer Stem Cells (CSCS) industry, and breaks down according to the type, application, and consumption area of Circulating Tumor Cells (CTCS) and Cancer Stem Cells (CSCS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Circulating Tumor Cells (CTCS) and Cancer Stem Cells (CSCS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19. In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
