Abstracts

Plasticizers (UK: plasticisers) or dispersants are additives that increase the plasticity or decrease the viscosity of a material. These are the substances which are added in order to alter their physical properties. These are either liquids with low volatility or solids. They decrease the attraction between polymer chains to make them more flexible. This report elaborates the market size, market characteristics, and market growth of the Citrate Plasticizer industry, and breaks down according to the type, application, and consumption area of Citrate Plasticizer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
