Abstracts

Civil engineering is a profession that deals with the engineering aspects of the planning, design, construction and maintenance of the built environment. The civil engineering industry operates in fields such as transportation systems, including railways, ports, airports, motor ways and bridges; water supply and waste systems; and urban planning.

The important functions of a civil engineer include investigating sites to determine the most suitable foundation for a proposed construction, preparing engineering calculations required for the design of projects and analyzing the risks associated with natural disasters.

This report elaborates the market size, market characteristics, and market growth of the Civil Engineering industry, and breaks down according to the type, application, and consumption area of Civil Engineering. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Civil Engineering in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
