Abstracts

Cleansing oils are used to remove makeup, surface debris, and excess oil. What makes them different is how they work compared to traditional water-soluble cleansers that have a cream, gel, or foaming texture.

Traditional cleansers cleanse primarily with surfactants, ingredients that interact with oil, makeup, and surface debris on skin in a manner that allows them to be rinsed with water. Well-formulated cleansers also deposit hydrating ingredients on skin so it feels smooth and soft rather than tight or dry.

Many cleansing oils also contain surfactants, but the surfactants are not the stars of the show; rather, the oils take center stage.

This report elaborates the market size, market characteristics, and market growth of the Cleansing Oil industry, and breaks down according to the type, application, and consumption area of Cleansing Oil. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cleansing Oil in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
