Abstracts

The introduction of cloud computing has enhanced and simplified information governance and management capabilities. It provides a central administration and control for all resources, Service-level agreement (SLA) backed agreements, and vendor managed infrastructure. Cloud computing eliminates the need for users to update and maintain IT infrastructure necessary to store information.

The service provider takes care of all maintenance services. The user need not install any additional software to access applications and services. SLA ensures reliable delivery, management, and maintenance of information governance policies.

This report elaborates the market size, market characteristics, and market growth of the Cloud-Based Information Governance industry, and breaks down according to the type, application, and consumption area of Cloud-Based Information Governance. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cloud-Based Information Governance in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
