## Abstracts

Cloud computing is a concept developed on the basis of distributed processing parallel processing and grid computing. Its working principle can be understood as the automatic splitting of huge computing processing programs into numerous smaller subroutines through the network. These subroutines are handed over to a system consisting of multiple servers for searching, calculation and analysis, and finally the processed results are passed back to the user.

This report elaborates the market size, market characteristics, and market growth of the Cloud Computing in Government industry, and breaks down according to the type, application, and consumption area of Cloud Computing in Government. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cloud Computing in Government in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
