Abstracts

Cloud Computing is the practice of sharing a network of remote servers which are hosted on the Internet to store, process, and manage data rather than on a local server or a personal computer. It specifically refers to a common storage space through which all the devices in the network can access data simultaneously. The use of Cloud computing technology not only gives cost benefits but also makes applications accessible to all devices in the network at any time and from any location.

This report elaborates the market size, market characteristics, and market growth of the Cloud Computing Service industry, and breaks down according to the type, application, and consumption area of Cloud Computing Service. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cloud Computing Service in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
