Abstracts

Cloud infrastructure refers to the hardware and software components -- such as servers, storage, a network and virtualization software -- that are needed to support the computing requirements of a cloud computing model. Cloud infrastructure also includes an abstraction layer that virtualizes resources and logically presents them to users through application program interfaces and API-enabled command-line or graphical interfaces.

This report elaborates the market size, market characteristics, and market growth of the Cloud Infrastructure Services industry, and breaks down according to the type, application, and consumption area of Cloud Infrastructure Services. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cloud Infrastructure Services in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
