Abstracts

Wire cut EDM equipment is run by computer numerically controlled (CNC) instruments, which can control the wire on a three-dimensional axis to provide greater flexibility. Wire EDM machining (Electrical Discharge Machining) is an electro thermal production process in which a thin single-strand metal wire in conjunction with de-ionized water (used to conduct electricity) allows the wire to cut through metal by the use of heat from electrical sparks. Due to the inherent properties of the process, wire EDM can easily machine complex parts and precision components out of hard conductive materials.
This report elaborates the market size, market characteristics, and market growth of the CNC EDM Wire Cut Machine industry, and breaks down according to the type, application, and consumption area of CNC EDM Wire Cut Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for CNC EDM Wire Cut Machine in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
