Abstracts

CNC machine is an automatic machine tool with a program control system. The control system can logically process a program specified by a control code or other symbolic instructions, decode it, express it with a coded number, and enter the numerical control device through an information carrier. After the arithmetic processing, various control signals are sent from the numerical control device to control the movement of the machine tool, and the parts are automatically processed according to the shape and size required by the drawing.

This report elaborates the market size, market characteristics, and market growth of the CNC Machine industry, and breaks down according to the type, application, and consumption area of CNC Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
