Abstracts

A CNC router (Or Computer Numerical Control router) is a computer-controlled cutting machine related to the hand-held router used for cutting various hard materials, such as wood, composites, aluminum, steel, plastics, and foams. CNC stands for computer numerical control. CNC routers can perform the tasks of many carpentry shop machines such as the panel saw, the spindle moulder, and the boring machine.
This report elaborates the market size, market characteristics, and market growth of the CNC Routers industry, and breaks down according to the type, application, and consumption area of CNC Routers.
